TURF and GOLF COURSE GRASS

Gibberellic Acid (GA3) is one of the most widely used agricultural products in the world and has been used as a growth enhancer for nearly 50 years. Gibberellic Acid is an effective and efficient hormone and when used in agriculture.

Apply Grospurt on Perennial ryegrass, Kentucky bluegrass, Bent grass, Bermuda grass, Tifdwarf, Tifgreen and other cultivars to initiate early growth in the spring and then in the fall. To prevent color change during periods of cold stress and light frosts or enhance regrowth during warm weather, apply Grospurt to maintain grasses as per the label.

WHY CHOOSE US

- GROSPURT CANADA is a 100% Canadian owned and operated company manufacturing high quality Gibberellic Acid products (GA3) for sale across Canada.
- GROSPURT products are the highest quality at a 90% minimum guaranteed purity.

OUR PRODUCTS

- GS-4 is the ONLY Gibberellic Acid (GA3) registered in Canada for application on Turf and Golf course grass.
- For Perennial ryegrass, Kentucky blue and Bent grass and other cultivars, apply 20-50 ppm (62.5-125 ml/L) every 2 weeks in early spring and fall.
- For Bermuda grass and other cultivars, cool weather apply 62.5ml/100L weekly or 125 ml/100L every 2 weeks and warm weather applications of 2.5-7.5 ppm (6.25-20 ml/100L) weekly.

‘HIGHER QUALITY MEANS BETTER RESULTS’
